

INSTRUCTIONS FOR BASIS “**GOLDEN TOUCH**” POLISHING CLOTH AND “**MAGIC POTION**” POLISHING FLUID

This procedure will remove dirt, grime, fingerprints and light “micro-scratches” on the acrylic surfaces of your turntable.

1. Fold the cloth over a few times to achieve a thicker, pad-like rectangle.
2. Apply a few drops of Magic Potion to the cloth.
3. Wipe the acrylic surface in a circular motion, staying in an area approximately 5 inches (12 cm) square.
4. Continue wiping in a circular motion, spreading the fluid across the surface, until the fluid starts to appear thinner and leaves shiny, oily areas. At this point, use lighter pressure with the cloth until most of the fluid has disappeared, leaving the acrylic surface oily and shiny.
5. Using a dry section of the cloth or another clean Golden Touch cloth, polish with light pressure, refolding the cloth often to expose new, dry areas of the cloth.
6. Continue with the dry cloth until the acrylic is clean and free of residue.
7. For deeper scratches, repeat the above steps as many times as necessary to remove all scratches.
8. **CLEANING:** The cloth may be laundered in warm water with mild soap and dried on the LOW HEAT setting. Normal washing and drying will not cause the cloth to lose its effectiveness.

For regular cleaning of your Basis Audio turntable, you may wish to keep two cloths: one for use with the Magic Potion and one for dry polishing.
